

****** NEW RELEASE ******

RACKABLE PALLET WITH SAFETY REBATES

A new version of the Pallenz rackable pallet brings new levels of safety to the product when being used on pallet racking.

To reduce the possibility of slip on the steel racking a rebate has been added to base of the pallet to provide a positive locating position.

With over 12 years extensive experience in the plastic pallet industry Pallenz Plastics Ltd has invested significantly in state-of-the-art manufacturing processes and product design to bring you the new range of Pallenz plastic pallets.

Two piece pallets all feature convenient four way entry, integrated RFID capsules, self draining surfaces, and are built from virgin food grade materials to meet demanding standards world-wide.

Attention to detail and the incorporation of small but important features such as built-in carry handles, and high deflection areas to guide forks into any of the four way entry points all serve to make the Pallenz pallet range easier to handle and to maximise the products operational service life.

PALLENZ pallet specifications (all dimensions in mm)
